Contributions by Stefan Bänziger, Marcel Baumgartner, Jürg Conzett, Aita Flury, Harry Gugger, Christian Menn, Daniel Meyer, Quintus Miller, Tivadar Puskas, Heinrich Schnetzer

The book opens an exciting discourse on contemporary structural engineering by presenting the work of the Basel engineering firm Schnetzer Puskas. The engineers themselves have their say as the primary commentators of their work: in thematic essays and in conversations with the editor they discuss a variety of buildings, shedding light on structural and constructive aspects of their contextual thinking as engineers. These thoroughly examinations are supplemented by essays from other outstanding engineers and architects.
